Providing Advanced Technology for the Year 2010 and Beyond

## Experience the Benefits of Monolithic Crowns from Salem

Salem Dental Laboratory is proud to offer two monolithic crowns that can handle almost any restorative need. Because both crowns, e.max and SALEMZR are priced at an identical **\$129 per unit**, we can focus on asking the right questions about indications and expectations, to arrive at the best choice for you and your patient.

### IPS e.max® Lithium Disilicate crowns

IPS e.max

e.max monolithic crowns are the buzz of the dental industry. e.max offers dentists improved fit, improved esthetics, and improved durability. Metal, zirconia, resin, and conventional feldspathic porcelain still have an important role, but e.max is perhaps the most versatile and reasonably priced option in the market today.

Although e.max is more chip resistant than the vast majority of other ceramic materials on the market, there are certain times when doctors may opt for an even stronger material in the posterior. Salem has a restoration that can help you avoid fractured and broken ceramic crowns.

### SALEMZR Crowns

SALEMZR Crowns from Salem are specifically designed to withstand severe parafunctional activity. With these virtually unbreakable all-zirconia crowns, you can offer your patients the strength to withstand severe bruxing and avoid metal restorations. SALEMZR is a full contoured monolithic zirconia crown or bridge with no porcelain overlay. This means it won't crack or chip like veneered All-ceramics. It is glazed with a smooth surface to increase esthetics.

SALEMZR

Call Salem at 216.671.0577 for more information about IPS e.max or SalemZR!

## More Dentists Choose Salem For Implant Solutions

Salem specializes in all the major brands of dental implants and offers complete support to our implant customers from comprehensive treatment planning through successful case delivery. Experienced technicians will help you choose the right combination of implant parts, plan your appointment protocol, and select optimal restorations for the best possible result. We also carefully calculate implant estimates to reduce pricing confusion and surprises.

Your team and your patients will benefit from our experience. Working with varied implant systems, modern CAD/CAM manufacturing, and a wide assortment of precision attachments, Salem Dental Laboratory fabricates over-dentures, single unit crowns, and

fixed or removable implant supported bridges.

- Our Technicians are available for simple to complex implant cases and can make surgical guides for implant placement.
- We offer free up front "cost estimates on cases" and can order the parts for you or assist you with your order.
- We can do any type of implant case: single unit, full mouth fixed implant cases or overdentures.
- We make tissue models on all implant cases.

## Give Your Patients The Best Over-Denture Possible

Salem Dental Laboratory has the experience and expertise to offer the best possible technical assistance with treatment planning and estimates on implant retained over-dentures. We are familiar with all the major implant systems so you can be sure to offer a hygienic over-denture with natural esthetics.

Salem offers a variety of designs for precision superstructures that fit any patient situation. These superstructures are screwed directly onto the dental implant and our preferred design contains snap into locator attachments (as shown below).

The attachment/superstructure configuration from Salem will securely maintain a denture while the patient eats and speaks, and allows the patient to comfortably and easily remove the prosthesis for cleaning purposes.

Remember at Salem “your case” is our most important case. We care for your patients restorations as though they were our very own. For more information give us a call at 800-747-5577.

## “Controlling Parafunctional Forces” How and Why to Use NTI

Please join Salem Dental Laboratory for a special lecture presentation that will introduce and develop the rationale for use of a uniquely designed anterior deprogramming device for diagnostic, therapeutic, and restorative uses in the general dental practice. These devices, approved by the FDA for the treatment and prevention of migraine headaches, also have a much broader application in a restorative and cosmetic dental practice.

There will also be a brief lecture on the TAP® appliance.

Seminar Information:

June 24, 2010 • Registration: 5:30pm • Course Time: 6:00pm • Sheraton Cleveland Airport Hotel, Cleveland, OH
